

Class II Biological Safety Cabinets

RS 232 Port and Zero Volt Relay Contact

- RS 232 Port to send operational information to Building Management System (BMS)
- Zero Volt Relay Contact to turn ON/OFF exhaust blower and signal the building alarm

ESCO

S S ISOCIDE

Sentinel™ Gold Microprocessor Controller

- Displays all safety information on one screen
- Centered and angled down for easy reach & viewing
- Selectable Quickstart mode for fast operation

Angled Corner & Glass Side

- Easy to clean
- Easy to reach service fixture and outlets
- Stainless steel side wall is available (AC2-S and AC2-D variant)

Divided Work Tray

- Easy to lift and clean
- Single-piece recessed tray is available (AC2-S and AC2-D variant)

Raised Arm Rest

- Helps prevent grille blocking
- Comfortable working posture

Removable Paper Catch

- Easy to clean
- Optional pre-filter can be fitted

Esco Airstream® Class II has been certified by PHE / Public Health England (formerly HPA) for compliance to EN 12469

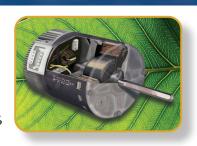

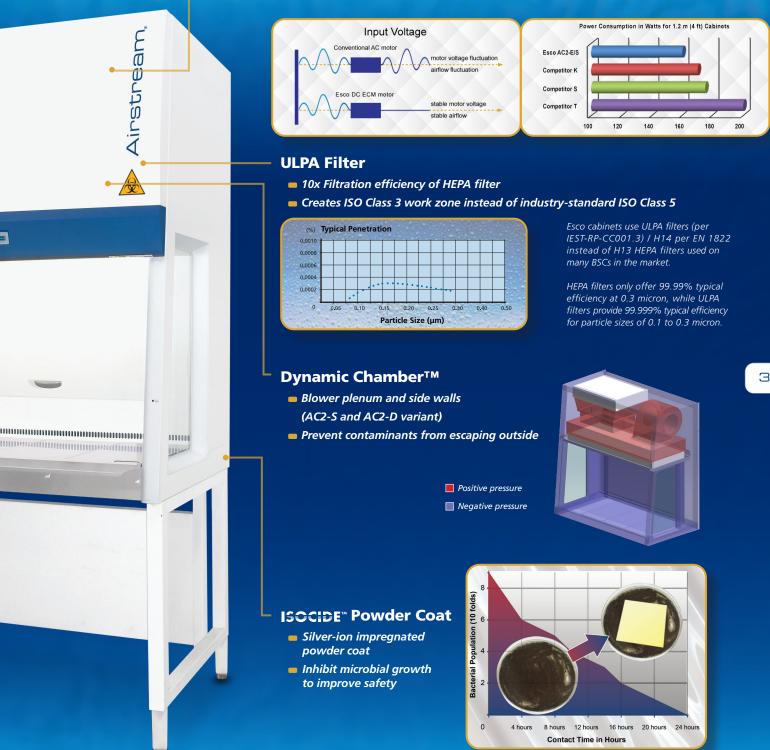

Airflow Sensor

- Monitors real-time airflow for safety
- Alerts the user if airflow is insufficient

Energy-Efficient DC ECM Motor

- The most energy-efficient Class II biosafety cabinet in the world, provides 70% energy savings compared to AC motor
- Stable airflow, despite building voltage fluctuations & filter loading
- Night Setback mode to further reduce power consumption by 60%

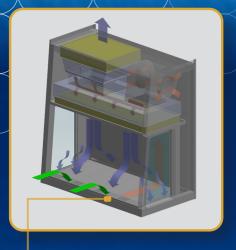

| | Biosafety Cabinet | Air Quality | Filtration | Electrical Safety |
|-------------------------|--|--|---|---|
| Standards Compliance | EN 12469, Europe SANS 12469, South Africa | ISO 14644.1 Class 3, Worldwide JIS B9920 Class 3, Japan JIS BS 5295, Class 3, UK | EN-1822 (H14), Europe IEST-RP-CC001.3, USA IEST-RP-CC007, USA IEST-RP-CC034.1, USA | IEC 61010-1, Worldwide EN 61010-1, Europe UL 61010-1, USA CAN / CSA-22.2, No.61010-1 |

^{*}CFDA certification is exclusive to AB2 models sold in China

Dynamic air barrier, where inflow and forward-directed downflow air converge

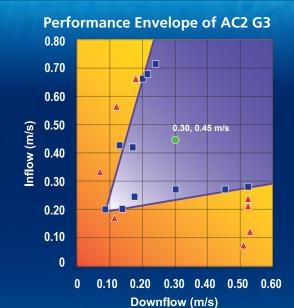

■ ULPA-filtered air

4

- Unfiltered / potentially contaminated air
- Room air / Inflow air

Cabinet Filtration System

- Ambient air is pulled through front grille to create inflow, without going through the work surface. Inflow is joined by half of the downflow, to create front air curtain that is fine-tuned to create a large performance envelope. The combined air stream travels through the back air column towards the blower.
- Approximately 1/3 of the air in the common plenum is exhausted through the ULPA filter to the room. The remaining ¾ of the air is passed through the downflow ULPA filter and into the work area as a vertical laminar flow air to create ISO Class 3 work surface and prevents cross contamination.
- Near the work surface, the downflow splits. About Half goes to the front grille, and half goes to the rear grille. A small portion enters the the side capture zones to prevent dead air corners (small blue arrows).
- The design was optimized to give large performance envelope, that provides operator and product protection at wide Inflow and Downflow variation from the Nominal point.

- Nominal Airflow
- Personnel / Product Protection
- Area of Personnel / **Product Protection**
- A No Personnel / **Product Protection**
- Area of no Personnel / **Product Protection**

LCD simultaneously displays time, airflow & sash status inflow and downflow velocities, and status remarks.

Multi Language: English, French, German, Spanish, Italian.

Diagnostics button, to easily check the cabinet operating parameters and assist servicing.

Large touchpad control buttons provide good tactile feedback. Color coded LED: green for fan; blue for LED Lamp and outlets; and orange for UV lamp.

Programmable UV light timer extends UV lamp life.

Direct Mounted / GFCI

Comprehensive Performance Testing At Esco

Every Airstream® AC2 model manufactured by Esco is individually tested, documented by serial number and validated with the following test methods:

- Inflow and downflow velocity
- PAO aerosol challenge for filter integrity
- Airflow pattern visualization
- Electrical safety to IEC61010-1
- Additional KI-Discus containment and microbiological testing are performed on statistical sampling basis.
